

United States Senate

COMMITTEE ON FINANCE

WASHINGTON, DC 20510-6200

April 21, 2010

Via Electronic Transmission

Theresa Eagleson
Medical Programs Administrator
Illinois Department of Healthcare and Family Services
State of Illinois
201 South Grand Avenue East
Springfield, IL 62763

Dear Administrator Eagleson:

In the United States, the federal and state governments spend roughly \$317 billion every year on the Medicaid program. As Ranking Member of the Senate Committee on Finance, I have an obligation to ensure that taxpayer dollars are appropriately spent on federal health care programs. Like the Medicare program, Medicaid suffers from systemic weaknesses that lead to fraud, waste, and abuse across the program, resulting in higher costs and less health care to those who are in need. The overutilization of prescription drugs, whether through drug abuse or outright fraud, plays a significant role in the rising cost of our healthcare system. The purpose of this letter is to request information regarding certain outliers in Illinois' Medicaid program and what steps Illinois takes to monitor rates of utilization.

In recent inquiries, I have asked the U.S. Department of Health and Human Services about physicians prescribing mental health drugs at astonishingly high rates. In addition to these concerns, a recent CNN report detailed the increasing abuse of OxyContin, Roxicodone, and Xanax. Specifically, the report described the role some pain management clinics and physicians play in the black market for these drugs. I write today to better ascertain how high rates of both mental health and pain medication utilization are affecting the Medicaid program, as well as how Illinois' rates compare to the national rates.

To that end, please provide charts that list of the top ten Medicaid prescribers of the following drugs for the years 2008 and 2009. For each prescriber, please provide his/her prescriber identifier, and the number of prescriptions written per drug per year, and the total amount billed to Medicaid per drug, separated for each year.

- Abilify;
- Geodon;
- Seroquel;
- Zyprexa;
- Risperdal;

- OxyContin;
- Roxicodone; and
- Xanax.

I thank you in advance for your cooperation and request that you provide the requested documents and written responses by no later than May 5, 2010. In your reply, please format information into a chart like the examples provided below. All formal correspondence should be sent electronically in PDF format to Brian_Downey@finance-rep.senate.gov or via facsimile to (202) 228-2131. Of course should you wish to discuss this matter further, please do not hesitate to contact Christopher Armstrong of my Committee staff at (202) 224-4515.

Sincerely,

Charles E. Grassley
Ranking Member

May 6, 2010

The Honorable Charles E. Grassley
Ranking Member
United States Senate
Committee on Finance
Washington, DC 20510-6200

Dear Senator Grassley:

I am writing in response to your April 21, 2010 request for the top ten prescribers for a list of specified drugs. The Illinois Medicaid program shares your concerns and is committed to guarding against fraud, waste, and abuse in the Medicaid program.

Attached is the data you requested. For each drug for each year, we have listed the top ten prescribers by name and Medicaid provider ID. You will note that in certain instances, the prescriber ID is the National Provider Identifier (NPI). In those cases, the prescriber is not enrolled as an Illinois Medicaid provider, and, therefore, we do not have a Medicaid provider ID for that prescriber. In those instances, the provider name on the attachment was obtained from the NPI Registry on the Centers for Medicare and Medicaid Services website.

Although we have provided the information as requested, we would like to caution you with regard to use of the data. The raw data, taken in isolation, has limitations. Without taking into consideration factors such as provider specialty and patient demographics, for example, a reviewer could potentially arrive at inappropriate or inaccurate conclusions.

We certainly do not want Illinois Medicaid providers who are practicing appropriately to be accused of inappropriate practices, or of violating state or federal laws or regulations, simply by virtue of being on this list. It should go without saying that someone has to be at the top of a list whose only criteria is the number of prescriptions written. Like many states, Illinois faces significant challenges in maintaining providers, especially within certain specialties. The possibility of being accused of wrongdoing may prove a deterrent to recruiting providers.

Again, we share your commitment to reducing fraud, waste and abuse in the Medicaid program, and we have many safeguards in place to guard against such, including claims processing system edits that prevent claims from paying at the pharmacy, requiring the provider to request prior authorization. Further, with regard to mental health drug utilization, Illinois, under its disease management program, has in place a program that identifies utilization that is inconsistent with evidence-based practices, and notifies the prescriber of the inconsistency.

The Honorable Charles E. Grassley
Page 2

Illinois would be happy to work with you to provide further information or otherwise assist you in the analysis of our claims data, or if you would like to discuss our concerns regarding the limitations of the data. If you have any questions, please feel free to contact me at 217/782-2570 or Theresa.eagleson@illinois.gov.

Sincerely,

A handwritten signature in cursive script that reads "Theresa Eagleson".

Theresa Eagleson, Administrator
Division of Medical Programs

VIA ELECTRONIC TRANSMISSION

Theresa Eagleson
Administrator, Division of Medical Programs
Illinois Department of Healthcare and Family Services
201 South Grand Avenue East
Springfield, IL 62763-0002

Dear Administrator Eagleson:

Your state provided my staff with data regarding the top ten prescribers of several pain management and mental health drugs in your state. These types of drugs have addictive properties, and the potential for fraud and abuse by prescribers and patients is extremely high. Mental health drugs continue to be prescribed at astounding rates and pain management clinics are turning into a hotbed for black market painkillers. When these drugs are prescribed to Medicaid patients, it is the American people who pay the price for over-prescription, abuse, and fraud.

After an extensive review of prescribing habits of the serial prescribers of pain and mental health drugs in your state, I have concerns about the oversight and enforcement of Medicaid abuse in your state. While I am sensitive to concerns about the potential for misinterpretation of the data you provided, the numbers themselves are quite shocking.

For example, the top prescriber of Xanax wrote 4,987 prescriptions for the drug in 2009. Between, Xanax, Abilify, Zyprexa, Seroquel, and Geodon, this individual wrote

10,675 prescriptions for antipsychotic drugs, accounting for \$2,321,199 paid by Medicaid. This constitutes 41 prescriptions each weekday.

It is my intention to ensure that each of the states is adequately monitoring, investigating, and stopping fraud and over-prescription of these types of drugs. Therefore, please provide answers to the following questions:

1. What action, if any, has your agency taken with respect to the prescribers identified to the Committee?
2. If there has been no action taken with respect to these prescribers, please explain why not.
3. Please identify which of the providers identified to the Committee remain eligible to bill the Medicaid Program.
4. Please provide the 2010 and 2011 numbers for the top prescribers of these same drugs.
5. Has each of these prescribers been cross-checked for complaints or misconduct with the state medical board or the National Practitioner Data Bank? If not, do you plan to do so?
6. Have any of the prescribers identified to this Committee been referred to your state medical board?
7. Is there any system set up in your state to identify and monitor excessive prescription writing? If not, why not?
8. Have you received any training or guidance from the Centers for Medicare and Medicaid Studies to help identify potential issues with prescription drugs?
9. Does your state maintain a database of all prescribed controlled-substances? If so, what entities have access to it?
10. Does your state have any point-of-sale restrictions related to maximum units, prior authorization, therapeutic duplication, or early refill? If not, why not?
11. Were any of these top ten prescribers identified in the federal-mandated Drug Utilization Review or CMS-base retrospective reviews?
12. Does your state have any programs in place to educate providers about the prescription of antipsychotics to children and adolescents?

Thank you in advance for your cooperation and attention in this matter. When responding to this letter, please number your answers in accordance with my questions. I would appreciate a response by February 13, 2012. If you have any questions, please do not hesitate to contact Erika Smith of my staff at (202) 224-5225.

Sincerely,

A handwritten signature in blue ink that reads "Chuck Grassley". The signature is written in a cursive, flowing style.

Charles E. Grassley
Ranking Member
Committee on the Judiciary

April 3, 2012

The Honorable Charles E. Grassley
Ranking Member
United States Senate
Committee on the Judiciary
Washington, DC 20510-6275

Dear Senator Grassley:

I am writing in response to your January 23, 2012 letter requesting updated information on the prescribing patterns of several specific drugs in Illinois, as well as information about our practices related to controlling. Attached is the updated data you requested.

As I pointed out in my previous response, it is important to note that being a top prescriber in and of itself is not indicative of fraud/abuse of the system. The raw data, taken in isolation, has limitations. Without taking into consideration factors such as provider specialty and patient demographics, for example, a reviewer could potentially arrive at inappropriate or inaccurate conclusions.

The Department's Office of Inspector General (OIG) does use the Service Utilization Resource System (SURS) system to identify providers that are outliers, and our new Predictive Modeling System to more accurately target providers related to overutilization. Many of the complaints related to over-prescribing are received from patients or staff of the offending provider. These complaints are then investigated in conjunction with other state and federal law enforcement entities. Additionally, the Department takes actions to terminate the eligibility of any provider who prescribes medications in excess of needs, or prescribes medications that places a patient at risk of harm. Recipients who are found to abuse prescriptions are restricted to specific physicians to monitor the prescribing patterns.

With regard to actions taken against the identified prescribers, there were 88 different providers delineated by the data. Of the 88 providers, 75.0% (66) have had some form of action taken against them by the OIG. These actions include, but are not limited to: law enforcement data requests, audits, recoupments, and terminations. Provider contacts and actions can occur for numerous reasons, including allegations of fraud, overprescribing, quality of care, etc. Every action taken by the OIG includes a review of the provider's physician profile including the provider's billing and prescribing practices; however, the audit may not have resulted in a finding relating to the prescribing practices of the provider. Although three quarters of the identified providers have had some action taken against them, it would take further review to determine whether the action was based upon the dispensation of the identified drugs or some other allegation.

Thirteen of the 88 providers (14.7%) are no longer in the system. Of the thirteen providers, seven voluntarily withdrew, and the remaining 6 are inactive due to fraud/abuse termination, expired licenses or death. Seventy-two of the 88 identified providers remain active in the Medicaid system (81.8%). However, due to the OIG actions taken, their activity could be occurring under an integrity agreement or some other form of oversight.

If a provider has not had an action against them, this is indicative of the complexity and breadth of the Medicaid system. OIG initiates actions against providers based upon complaints, audits, peer reviews and related enforcement actions. It is very possible that individual providers can operate for long periods of time without “bubbling up” through the SURS, which attempts to identify outliers within the system. Once identified (regardless of the source of notification), the OIG vigorously pursues all applicable and available enforcement actions.

The Department notifies the State licensing agency of all actions where the Department’s action results in the termination of the provider’s eligibility from the Medical Assistance Program. Additionally, in instances where the prescribing practices would place the recipients at immediate risk of harm, the OIG is required to notify the Illinois Department of Financial or Professional regulation. Additionally, the OIG is currently bound by the actions of the licensing authority, and cannot take action against a provider without allegations of fraud or actual indictment. OIG is currently attempting to broaden its ability to suspend providers who place recipients at risk of harm due to prescribing practices through proposed legislative changes.

In regard to cross-checking of providers for complaints or misconduct with the state medical board or the National Practitioner Data Bank, all providers in Illinois are checked to validate their license upon enrollment. OIG also has a close working relationship with the state licensing agency and cooperation between the two provides additional avenues of validation. All of these providers will be re-checked to determine if any licensure actions have occurred since enrollment. Should license issues arise, OIG will respond accordingly.

In regard to CMS training, CMS provides a multitude of training through the Medicaid Integrity Institute (MII) at the National Advocacy Center (NAC) in Columbia, South Carolina. Although the class offerings must cover the entire Medicaid system, there are specific classes related to Pharmacy. There is an upcoming Pharmacy program at the MII which should include OIG participation.

The State of Illinois, through its Illinois Department of Human Services (DHS), maintains a database of all prescribed controlled substances. OIG is currently in discussions with DHS to collaborate with this data to determine if recipients restricted through the OIG’s Recipient Restriction Program are also receiving prescriptions from other payers. This collaboration will allow the OIG to enhance its predictive modeling system with routines related to overall prescription usage, and not just Medicaid prescriptions. These routines can eventually become “batch” processes that can be run at any time to identify over-prescribers or over-utilizing recipients.

The Department employs many point-of-sale edits for the purposes of preventing inappropriate utilization, including prior approval, refill-too-soon, daily and monthly quantity limits, daily dose limits, duplicate therapy limits, and age and sex restrictions. In addition, the Department has a recipient-specific edit which allows us to require prior approval for specific recipients who have a history of questionable narcotic utilization patterns prior to allowing a claim for a narcotic drug to process.

With regard to the prescribing of antipsychotics in children and adolescents, Illinois uses several approaches to educate providers about the use of antipsychotics in children. The Department requires prior approval for atypical antipsychotics for children under the age of 8. This allows the Department an opportunity to review a child’s medication and diagnosis history prior to approving an atypical antipsychotic. The Department’s prior approval contractor, the University of Illinois at Chicago (UIC), has medical directors on staff, who often consult with prescribers when a questionable prior approval request is received. In addition, the Department contracts with UIC to administer the DocAssist program, which is designed to help primary care clinicians screen, diagnose, and treat the mental health and substance use problems of children and youth through training, consultation and referral assistance.

DocAssist maintains a toll-free helpline staffed by UIC faculty and staff clinicians with expertise in the diagnosis and treatment of child and youth mental health and substance use problems. This helpline is available for providers who wish to consult with a psychiatric specialist about a specific patient. DocAssist also provides topic-based online or on-site education/training on the identification and management of certain mental health disorders.

Rest assured that Illinois Medicaid shares your commitment to reducing fraud, waste, and abuse in the Medicaid program. We are continually reviewing our monitoring and editing processes in order to enhance our processes to better detect and prevent fraud, waste, and abuse.

Sincerely,

A handwritten signature in black ink, appearing to read "Theresa Eagleson", with a stylized flourish at the end.

Theresa Eagleson, Administrator
Division of Medical Programs
